

28-09-2005: Dataprep makes 1st appearance at GITEX (The edgedaily.com)

Dataprep group member Solsis (M) Sdn Bhd recently made its first appearance in Dubai at the Gulf Information Technology Exhibition (GITEX).

Celebrating its silver jubilee this year, GITEX has over the years earned the reputation in showcasing the top and premier ICT exhibitions on an international scale, attracting thousands of potential customers from Asia, the Middle East and North Africa.

"Solsis is no stranger to the IT sector as it has over the years implemented many innovative solutions for the government, education and telecommunications circle," Dataprep said in a statement on Sept 27.

Solsis showcased four of its premier solutions, as a market opening approach in reaching out to the Middle Eastern market especially in tapping the government, telecommunications, financial and SMB sector.

Dataprep's group chief marketing officer, Awalan Abdul Aziz said: "The introduction of our premier solutions mirrors Dataprep Group's motto of having the courage to compete in tomorrow's challenging technology and global environment".

He said Solsis' appearance in the Middle Eastern market was timely as reflected by the recent reports from IDC which predicts, that the worldwide IT spending will increase to US\$1.3 trillion (RM4.90 trillion) by the end of 2009, with a compound growth rate of 5.9% from 2005-2009.

The IDC report also highlighted that the government, manufacturing and banking sector will provide the most attractive opportunities for IT vendors worldwide.

Solsis brought to Dubai its innovative Electronic Court Management (eCourt) Solution, where the registration of cases, judicial administration, courts recording transcription and keeping of online records was introduced in its homeland Malaysia early this year.

It also showcased its Electronic Job Exchange Management Solution which formed the backbone of the Malaysian Electronic Labour Exchange (ELX). Both eCourt and ELX are part of the six flagship applications under the Malaysian e-Government for Community.

For the SMB and the telecommunication sector, Solsis introduced its e-Business Community Solution known as InstantOffice, which provides an ASP operator the ability to offer its subscribers the full capabilities of conducting a business to business with its business partners, suppliers and customers.

Solsis' fourth solutions, Service Lifecycle Management (SLM), was also previewed to demonstrate the managing of a full support cycle ranging from problem identification to problem resolution. The solution is expected to benefit service oriented organisations.
